## REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance:
2. Claims 1-19 and 36-43 are allowed.
3. The closest prior art of record does not teach, suggest or disclose a device for sterilizing the production of packages with a gaseous sterilant comprising a heating zone, a sterilization zone and a venting zone as set forth in independent claim 1, wherein the device also comprises a temperature sensor and relative humidity sensor located outside of the device where the sterilizing agent does not flow as well as a concentration meter located in the sterilization zone, and a control unit that controls the amount of sterilizing agent introduced in the sterilization zone based on the measurements from the temperature sensor, the relative humidity sensor, and the concentration meter.
4. Zelina et al. (U.S. Publication No. 2002/0159915) discloses a device for the sterilization of packages comprising a heating zone, a sterilization zone, and a venting zone as shown in Figure 8. The reference also discloses a temperature sensor and a concentration meter located in the sterilization zone as well as a control unit that controls the amount of sterilizing agent that enters the sterilization zones based on the measurements provided by the temperature sensor and the concentration meter. Zelina does not disclose that the temperature sensor is located outside the device or a relative humidity sensor that is utilized to help control the amount of sterilizing agent that is introduced into the sterilization zone.

5. Watling (U.K. Patent Application No. GB 2354443 A) discloses a device for the sterilization of a sealed chamber wherein the device comprises said sealed chamber and a controlled loop with ambient temperature and relative humidity sensors located outside the chamber. Watling also discloses a condensation meter located inside the chamber and a control unit that utilizes the measurements from the temperature sensor, the humidity sensor and the condensation meter to control the amount of sterilizing agent that is introduced into the sealed chamber. Watling does not disclose heating and venting zones in conjunction with a sterilization zone or a concentration meter located inside the sterilization zone. Furthermore, Watling does not disclose that the temperature and humidity sensors are located outside the device in a location where sterilizing agent does not flow.

6. Therefore, the prior art of record does not teach, suggest or disclose a device for the sterilization of packages comprising a heating, sterilization, and venting zone as set forth in independent claim 1 as well as temperature and humidity sensors located outside the device where sterilizing agent does not flow that is utilized in conjunction with a concentration meter and a control unit that controls the amount of sterilant introduced into the sterilization zone based on the measurements from the temperature, humidity and concentration sensors.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
